Energy Security & Environment

2-4 MAY 2018

DJERBA-TUNISIA

OBJECTIVES

As the world is changing rapidly; energy sector is evolving as well. Energy is fundamental for the quality of our lives. Opinion leaders quote that, 'the energy industry sits on the cusp of massive change'. However it is always extremely challenging to manage change, especially in complex industries such as energy industry.

ESE 2018 aims at providing a platform for researchers, engineers, scientists and academicians as well as industrial professionals from all over the world to present their research contribution and development activities in the energy sector. It provides opportunities for the delegates to exchange new ideas and application experiences face to face, to establish business or research relations and to find global partners for future collaboration.

This will be enhanced by a **QHSE** industrial security training day.

ESE 2018 publishes the best presented papers in partner journals.
